Golden indulgence

About us

Our oil mill has its origins as a research project. The subsequent company founder developed a procedure for manufacturing cold-pressed rapeseed oil from hulled seeds at the University in Essen. This process is unique and patented. Out of love for the 'pure kernel', a philosophy has arisen that has sustainably characterised our oil mill ever since its founding in 2000. The truly 'golden kernel' explains why our kernel oils have such a uniquely pure and characteristic flavour.

Pure enjoyment in harmony with nature: this aspiration involves a high degree of responsibility toward our natural resources. We use raw ingredients „without genetic engineering“ and are certified in accordance with the VLOG standard. As a manufacturer of natural edible oils, we have been dedicated to active nature conservation right from the outset. Our actions are characterised by a central theme that revolves around the concept of sustainable dealings.

Our portfolio for your success

By purchasing one of our kernel oils, you have chosen a unique, high-grade product. Our unique manufacturing process hulls the rapeseed, which are merely 2 millimetres in size. The vein of gold, the so-called rapeseed kernel, is found underneath the bitter hulls, which protects and stores the high-grade rapeseed kernel oil in its cells. Thanks to patented manufacturing and carefully selected raw ingredients, our cold-pressed kernel oil is something truly special - and unique on the market. Gourmet oil with a pure, absolutely clean and delicate nutty flavour. Our product range includes high-grade kernel oils on the foundation of conventional seeds and products in organic quality. Both our own and external laboratories work to ensure our stringent requirements regarding the seed selection, crop rotation, time of harvest and storage are followed. In addition to this, we not only satisfy the requirements regarding the Council Regulation on Organic Agriculture but also the stringent Bioland guidelines.

- Unique manufacturing process
- Free from chemical solvents
- Rapeseed from nearby
- Produced with highest quality standards
- Climate-friendly
